

## Park and Ride in Rome with Fast Park®

New parking facility in Rome: the installation is free standing and demountable.

In the end of October the opening of a new enhanced parking area has been celebrated in Rome. The new installation is located in via Casal de' Pazzi, next to the metroline station Rebibbia, and has been realized by means of Fast Park®, a product of the Italian Fast Park Sistema Srl.

This special parking solution is demountable with a free-standing parking deck. The surface decking system design has engendered, following the example of the Parking "ATAC Trastevere", a user-friendly Park and Ride, a significant contribution to the local parking re-qualification. The work was commissioned and financed by the Municipality of Rome. As established on planning, the completion of work was notified by the first semester 2010. Total capacity of the parking deck is 470 car spaces.

The safety of investment comes along with the cost effectiveness of the system, consequently allowing the highest return on investment conceivable for a parking structure. The payback period of the initial capital expenditure corresponds to a time span of just a few years of parking management, says Fast Park Sistema. ■■
