

Fast Park® in France

The profile of prefabricated parking structures has been raised with the announcement that Italian company Fast Park® has completed its first French installation.

The system was installed at the railway station car park in Valenciennes. The company was commissioned by management company Effia Concessions.

Valenciennes had to reduce the size of its railway car park because of the introduction of the tramway line Transville.

The new Fast Park® modular unit has created 300 car spaces - up

Above

The Fast Park® system was installed at the railway station car park in Valenciennes

from the 196 places of the original.

Speed was a key factor in the installation, which took three months.

A further advantage of the modular system developed by Fast Park® is its flexible, phased installation method, which reduces disruption of the car park during installation.
