

WHAT DOES THE OPERATOR OF A BUSY CAR PARK DO WHEN THERE IS EXTENSIVE REPAIR WORK OR A NEW BUILD HAPPENING, AND SUDDENLY HUNDREDS OF CARS HAVE TO BE PARKED SOMEWHERE?

Speed is just the ticket

Solutions from the continent

The question of how to manage parking needs in a changing environment is one that crops up for the majority of large organisations from time to time. Hospitals are a major client of European company Fast Park, which supplies modular, free-standing, demountable and portable car parks.

Fast Park offers a turnkey package, including installation, dismantling, resale and re-installation and the company's planning strategies apply to both midterm temporary and permanent parking solutions.

The opening of a large Euronics sales outlet in via Pietro Nenni, Palermo (Sicily) was the focus of the final Fast Park project to complete in 2009. The project included the construction and enhancement of a car park to be completed before the end of the year that would satisfy the parking and traffic flow needs of a large shopping mall.

The parking structure adopted by the client, Edilpa SpA, is actually the same one built some years ago in Palermo, a few kilometres from Euronics, inside the Auchan Shopping Centre. The Fast Park – Euronics hosting capacity is 100 new car spaces and, since its opening in December, the parking deck has seen record amounts of parking and excellent traffic circulation.
