

No sooner said than done: Fast Park®

Fast Park® is getting abroad more and more consideration on the international market of parking with growing outcomes and satisfaction. Meanwhile, in Italy, its awareness cannot stop anymore. A lot of municipalities and national authorities have shown their increasing interest in the product, have recognized its technical features and, as a result of the evaluation studies highlighting the spare impact of Fast Park® on the Environment, they remarked the importance of environmental integration complied by the product on a satisfactory way. The results make plain: more than 80 references and a continuous support on demand in planning made by representatives of public bodies and corporate.

The system was recently installed successfully in Trieste, Italy. The parking is located in the area of the *Cattinara Hospital*, which belongs to the Hospital and University Organization "Ospedali Riuniti" Trieste. This area, called P2, has been enhanced with an installation Fast Park® with a capacity of 316 car places.

Although this type of parking is conceived as a small and light structure, in order to soften its impact on the surrounding environment, it

has been foreseen as installation site to exploit a still existing terrace on a hill located in the hospital area. Consequently, Fast Park® is not visible from the main building of the hospital because of its position.

The erection of the parking area has greatly reduced the traffic not just around the pavilions of the hospitals, but also the traffic volume in the hospital area. Cars always have direct access to the parking area. By wish of the client a prerequisite was independent entrances of the parking area. The parking space is in the upper storey exclusively for the use of visitors, while the staff can park on the ground floor.

Fast Park® provided a direct answer to the needs of the parking area administration. Its offer includes delivery, installation of the parking system, technical supervision and bureaucratic advice, from planning to project achievement.
